

JAG Large Cap Growth Fund

Fund Highlights

- Growth fund with high active share vs. Russell 1000 Growth Index
- Focused, best ideas portfolio diversified across 30-40 positions
- Proprietary, bottom-up research approach results in differentiated perspective
- Disciplined and repeatable process drives style consistency

Investment Philosophy

We seek to build long-term wealth by investing in innovative and sustainable growth companies. Our disciplined and repeatable process results in a focused and differentiated portfolio of stocks that exhibit superior growth characteristics, solid fundamentals, and compelling price appreciation potential.

Fund Objective

JAG's Large Cap Growth Fund is designed for investors seeking long-term capital appreciation. The fund invests primarily in common stocks of U.S. companies with large market capitalizations that JAG believes possess strong earnings and revenue growth potential.

Fund Facts

Inception Date	December 22, 2011

Benchmark	Russell 1000 Growth

Expense Ratio

	Class A	Class I	Class R
Gross	1.53%	1.28%	1.28%
Net	1.50%	1.25%	0.90%

JAG Capital Management has contractually agreed to reduce its fees and/or absorb expenses of the Fund in order to limit the total annual operating expenses. Total returns would be lower had such fees and expenses not been waived and/or reimbursed. This agreement will terminate on 1/31/2021, unless the Board of Trustees approves an earlier termination. Please review the fund's prospectus for more information regarding the fund's fees and expenses.

Important Fund Information

There is no assurance that the Fund's investment objective will be achieved. Investing in mutual funds involve risks. Past performance does not guarantee future results. Investment return and principal value will fluctuate with changing market conditions so that when redeemed, shares may be worth more or less than their original cost. Investors should consider the Fund's investment objectives, risks, charges and expenses carefully before investing or sending money. This and other important information about the JAG Large Cap Growth Fund can be found in the Fund's prospectus. **To receive a copy of the Fund's current prospectus, or to obtain the most recent month-end performance information please call your financial advisor or the Fund, toll free at 855.552.4596 (855.5JAGLYN). It can also be downloaded from our website: www.jagcapitalfunds.com. Please read the prospectus carefully before investing. Shares of the JAG Large Cap Growth Fund are distributed by Northern Lights Distributors, LLC member FINRA, which is not affiliated with JAG Capital Management LLC.**

Investing in the Fund involves risk. Equity securities are more volatile and carry more risk than other forms of investments. The portfolio manager's judgments about the attractiveness, value and potential appreciation of particular stocks, options, or other securities in which the Fund invests or sells short may provide to be incorrect and there is no guarantee that the portfolio manager's judgment will produce the desired results. Overall stock market risks may also affect the value of the Fund. Factors such as domestic economic growth and market conditions, interest rate levels and political events affect individual securities and the securities markets generally. Because a relatively high percentage of a non-diversified Fund's assets may be invested in the securities of a limited number of companies that could be in the same or related economic sectors, the Fund's portfolio may be more susceptible to any single economic, technological or regulatory occurrence than the portfolio of a diversified fund.

Glossary

Russell 1000 Growth Index (R1G)

Measures the performance of the large-cap growth segment of the U.S. equity universe. Includes those Russell 1000 index companies with higher price-to-book ratios and higher forecasted growth values. The index is not available for purchase.

Price / Earnings Ratio

Current stock price divided by trailing annual earnings per share or expected annual earnings per share.

Fwd EPS Growth

A company's profit divided by its number of common outstanding shares. The prospective EPS growth rate is calculated as the percentage change in trailing 12-month earnings and the consensus forecast for earnings over the coming 12 months.

Fwd EPS Revisions

Percent change over the past 13 weeks in EPS estimates for the next fiscal year.

Market Cap

The total dollar value of all outstanding shares. Computed as shares times current market price. Capitalization is a measure of corporate size.

Sharpe Ratio

Sharpe Ratio uses standard deviation and excess return (a measure of a security or portfolio's return in excess of the U.S. Treasury 3-month Treasury Bill) to determine the reward per unit of risk.

Active Share

Active share is a measure of the percentage of stock holdings in a manager's portfolio that differ from the benchmark index. It is calculated by summing the absolute value of the differences between the portfolio and benchmark weights and dividing that number by two.

Alpha

Alpha measures the nonsystematic return or the return that cannot be attributed to the market (i.e., how a manager performed if the market has had no gain or loss). It is calculated by taking the average of the manager's return minus the risk free rate and subtracting the product of the manager's beta and the average of the index's return minus the risk free rate.

Beta

Beta is a measure indicating the volatility of a manager relative to a chosen market. A beta of 1 means a manager has about the same volatility as the market, where higher betas are associated with higher risk levels and visa-versa.

R-Squared

R-Squared is the percentage of a security or portfolio's return movements that are explained by movements in its benchmark index, showing the degree of correlation between the portfolio and the benchmark.
